DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 13-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Schmitt et al. (US 5199950).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hunjan et al. (US 5906590) in view of Cohen et al. (US 4686963) and Schmitt et al.

Hunjan discloses the claimed invention including a steerable catheter assembly including a catheter, a tip section, a control handle and puller wire control system. Hunjan does not explicitly disclose the specific means for stabilizing the steerable tip. Cohen discloses a bi-directional control system for a any device controlled by torsion resistant articulation comprising a pair of stabilizing features disposed in the outer cylindrical wall and diametrically opposed in the tip portion of the catheter. Schmitt discloses the use of metal, fabric or plastic strips for

Art Unit: 3742

providing stabilizing means incorporated into the catheter body. It would have been obvious to one of ordinary skill in the art at the time the invention was made, in view of Cohen and Schmitt, to modify the device of Hunjan to include an outer layer with stabilizing elements incorporated therein in order to better control the bending of the steerable catheter assembly. With respect to claims 7, 9, 21, and 23, the method of forming the device is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ockuly et al. (US 5395328), Stevens-Wright et al. (US 5715817) disclose steerable catheter assemblies with similar structure to applicant's invention.
